

**ESSENTIAL PROCEDURES IN  
PAEDIATRIC INTENSIVE CARE**

## **Measuring ulnar length**

- Prepare your equipment. You will need a segmometer and a method of recording the measurement. A disposable measuring tape may be used if no segmometer is available.
- Locate and mark the styloid process of the ulna
- Locate and mark the olecranon process of the ulna
- Straighten the arm and measure the distance between the two points
- The measurement should be performed three times, and the mean recorded
